Namespace Index

1.1 Packages

Here are the packages with brief descriptions (if available):

build_text_mat
compare_fy 1
conv_decaylib
conv_fylib
conv_fylib_janis-csv
conv_nndc_decaylib
conv_xslib
convert_decay-old-format_to-new-format
find_isomeric_branching
nuclide_chart_compare_fy
nuclide_chart_jeff33-32
openbu
openbu.cell 3
openbu.couple
openbu.couple_openmc
openbu.couple.openmc_fix
openbu.data
openbu.data.list_and_dict
openbu.data.read_lib_functions
openbu.input
openbu.nax
openbu.nax.functions
openbu.passlist
openbu.passport
openbu.salameche
openbu.salameche.burn
openbu.salameche.cram
openbu.salameche.mat_builder
openbu.salameche.py_pade
openbu.sequence
openbu.standalone
openbu.system
openbu.utils
openbu.utils.data_processor
openbu utils functions

2 Namespace Index

ppenbu.utils.printer	84
ppenbu.utils.reactions_class	84
plot_full_reduced_lib_chart	84
ead_energ_grid	85
read_fy	86
ks flux folder	87

Chapter 2

Design Unit Index

2.1 Design Unit Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

Exception	
Initial_nucl_not_in_Nucl_set	41
Initial_nucl_not_set	41
Nucl_set_not_in_Lib_nucl	52
Nuclide_list_redundant	53
Passlist_not_defined	58
Initial_nuclides_not_in_nuclide_list	42
STOP	19
Neg_decay	50
Neg_xs	50
Nuc xs not found	52
Incorrect_nuc_id	41
No_fission_XS	51
Not_a_Fission_Product	51
Nuc_xs_not_found	52
XS not yet set	
Step 0	19
Cell name not found	14
xs_name_not_found	30
Empty_argument	38
Empty data	39

5.26.1.6 burn_substep_pcME4()

5.27 openbu.salameche.cram Namespace Reference

Functions

5.27.1 Detailed Description

Compute the solution of the matricial depletion equation using the CRAM method

5.27.2 Function Documentation

5.27.2.1 CRAM16()

```
def openbu.salameche.cram.CRAM16 ( \label{eq:at_norm} At, \\ N\_0 \ )
```

CRAM uses the Chebishev rational approximation method to compute the solution of the matricial depletion equat

5.27.2.2 CRAM_density_check()

```
def openbu.salameche.cram.CRAM_density_check ( bucell, \\ N \ )
```

5.27.2.3 CRAM_reality_check()

```
def openbu.salameche.cram.CRAM_reality_check ( cell, \\ index\_dic, \\ N )
```

5.28 openbu.salameche.mat_builder Namespace Reference

Functions

5.28.1 Detailed Description

Uses the passport list to build the transmutation matrix

5.28.2 Function Documentation

```

Inheritance diagram for Passport:

Public Member Functions

Public Attributes

Private Member Functions

Private Attributes

Static Private Attributes

6.25.1 Detailed Description

passport stores all the relevant data of indivudual nuclides and offers methods to extract information on them

The passport class is individually instantiated for each nuclide. It contains two types of information: content data, such as the atomic mass, decay constant or the element's family (actinide, fission product) Variable data such as cross sections or fission yields do vary during a simulation and need thus to be updated some of the data are created at the time of the instantiation of the class for a nuclide such as the element neutron reaction daughters. Other type of data, typically large in size such as cross sections and decay of a setter method will enable any script that reads the data source to set this data for the passport of a specific code of Open-Burnup to set the data for a list of passports. The other way to explicitly set the data is go to the data source itself, read the data and set it for the passport of a specific nuclide. This method user-friendly way to get information on individual nuclides.

```
Attributes:
```

```
* **decay_a:** returns the absolute value of the decay constants of the nuclide

* **decay_b:** returns the percent fraction value of the decay constants of the nuclide

* **fy:** returns the value of fission yields in percent

* **mass:** returns the atomic mass of the nuclide

* **xs:** returns the absolute value of cross sections for the nuclide

* **FAM:** returns the family group name of the nuclide

* **xs_relatives:** returns neutron reaction's daughter nuclides' id

* **decay_relatives:** returns decay reaction's daughter nuclides' id
```

Methods:

```
* **set_mass():** set the atomic mass of the nuclide

* **set_decay():** set the decay constants (both absolute values and percent fractions) of the nuclide

* **set_xs():** set the cross sections of the nuclide

* **set_fy():** set the fission yields of the nuclide

* **load_mass():** load the atomic mass of the nuclide

* **load_decay():** load the decay constants (both absolute values and percent fractions) of the nuclide

* **load_mass():** load the cross sections of the nuclide

* **load_mass():** load the fission yields of the nuclide

* **get__zamid():** returns the zzaaam id of the nuclide
```

6.25.2 Constructor & Destructor Documentation

* **get_nuc_name():** returns the name of the nuclide

```
\begin{tabular}{ll} \tt def get\_natural\_abundance ( \\ & self ) \end{tabular}
```

6.25.3.60 get_z()

```
def get_z (
     self )
```

Returns the atomic number of the nuclide $% \left(1\right) =\left(1\right) \left(1\right$

6.25.3.61 load_decay()

```
def load_decay (
          self )
```

Load the decay constant value of the nuclide

This method directly fetches the decay constant values from the source data and automatically set of the passport object

6.25.3.62 load_fy()

```
def load_fy (
          self )
```

Load the fission yields data of the nuclide

This method directly fetches the fission yields data from the source data and automatically set of the passport object

If the nuclide for which the fission yields data are being loaded is not a fission product, the error $*Not_a$ Fission_Product* will be raised

6.25.3.63 load_mass()

```
def load_mass (
          self )
```

Load the atomic mass of the nuclide in gram

This method directly fetches the atomic mass from the source data and automatically set of the passport object

6.25.3.64 load_xs()

```
def load_xs (
          self )
```

Load the cross sections data of the nuclide

This method directly fetches the cross sections data from the source data and automatically set of the passport object

```
6.25.3.65 mass() [1/2]
def mass (
             self )
Return the atomic mass of the nuclide in gram
6.25.3.66 mass() [2/2]
def mass (
             self,
              new_mass )
6.25.3.67 name()
def name (

6.25.3.68 pikachu()
def pikachu (
             self )
6.25.3.69 set_decay()
def set_decay (
              self,
              decay_a,
              decay_b )
Set the absolute and fracional values of the decay constant of the nuclide
6.25.3.70 sorted_allreacs_tuple_mat()
def sorted_allreacs_tuple_mat (
              self )
```

```
6.25.3.71 state()
def state (
            self )
6.25.3.72 xs_child()
def xs_child (
       self )
Returns the neutron reactions' daughter products
6.25.3.73 xs_parent()
def xs_parent (
            self )
Returns the neutron reactions' daughter products
6.25.3.74 xs_seq() [1/2]
def xs_seq (
             self )
6.25.3.75 xs_seq() [2/2]
